Singular Genomics Proprietary sFTP Usage Guide v1.1

There are three methods for downloading/retrieving your data when using the Singular Genomics sFTP Transfer platform

Method 1: Web Browser

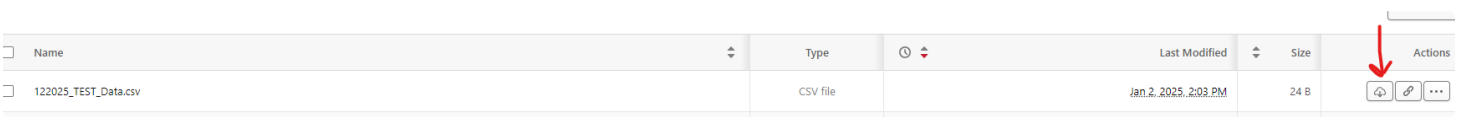

1. You will have received an invite to our account, with the correct permissions assigned to you during discussion with your Singular representative and Singular Enterprise IT. Complete the invitation by setting up your password and testing login.

2. Upon login to https://transfer.singulargenomics.com/files/ you will be presented with your data folder

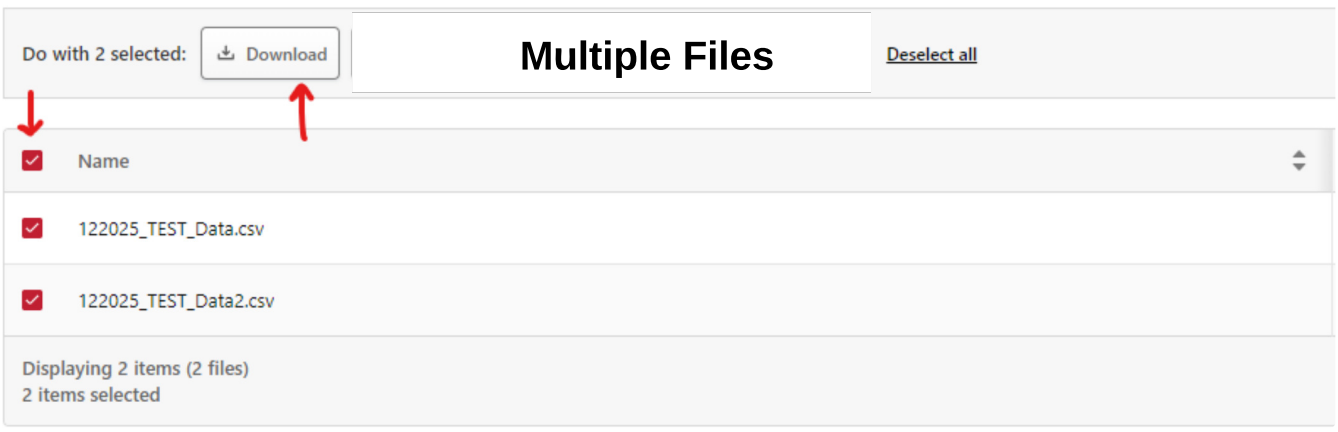

3. To download files individually click the download button, shown below next to the file you want to retrieve. For multiple files, either click the select all check box at the top of the name row, or check off the files you want to download, then use the download button. **Please note that you will only have access to download.

Single File

Multiple Files

Method 2: sFTP Transfer (For Advanced Retrieval)

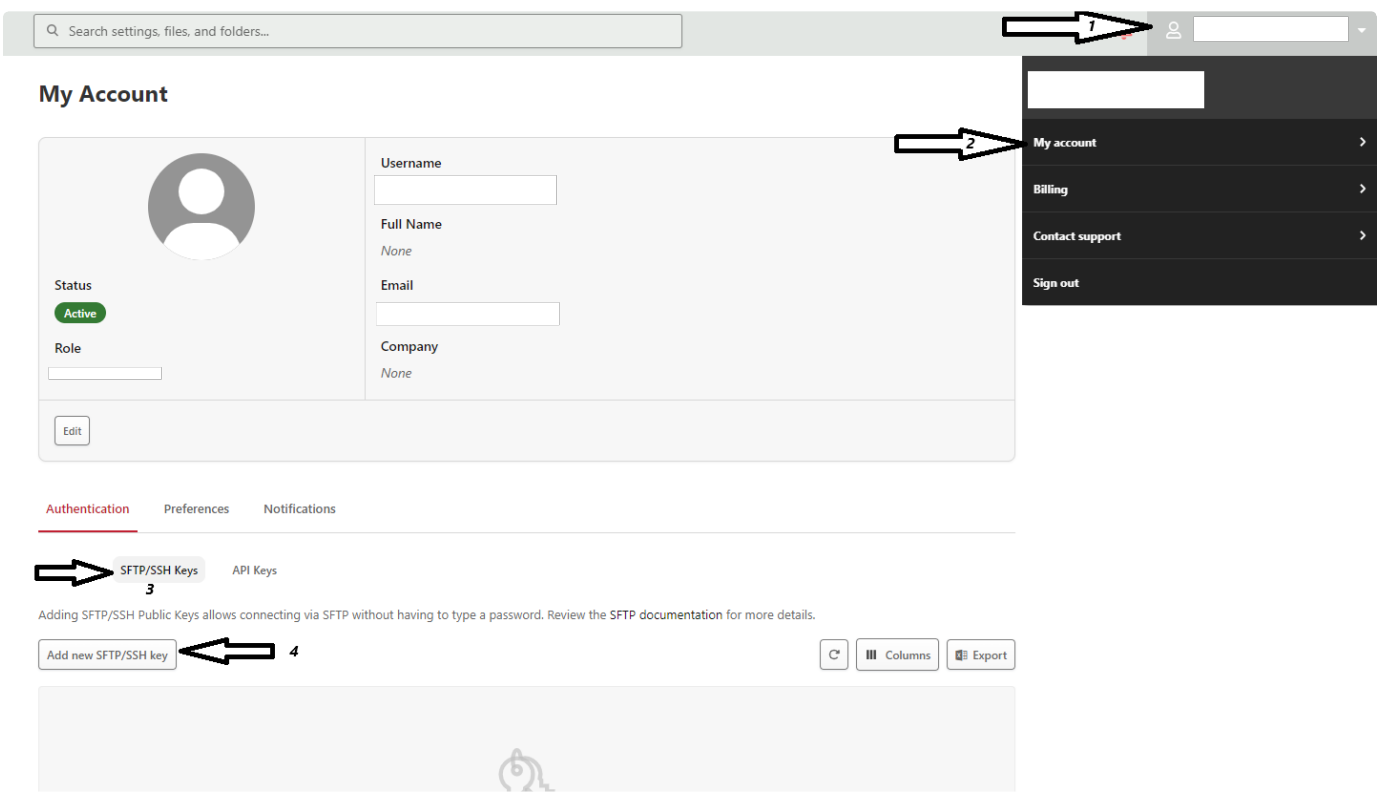

1. You will have received an invite to our account, with the correct permissions assigned to you during discussion with your Singular representative and Singular Enterprise IT. Complete the invitation by setting up your password and testing login.

2. Upon login to https://transfer.singulargenomics.com/files/ you will be presented with your data folder

3. You may elect to use Filezilla, Cyberduck or similar tool, for sFTP access. You can use the standard login process with the sFTP protocol. You may also use token based login. To do so, you will need to generate a token to use with the tool of your choice. To do so, follow the directions below:

4. Login via step 2 above

5. Click on your user profile, top right corner, then click my account. From there you will see sFTP/SSH Keys and have the ability to add a new one.

6. After adding a new key, take note of the token information, you will use this key and secret to fill into your sFTP application of choice, which will be used to authenticate you securely into the platform.

7. You will now be able to bulk transfer data

Method 3: Desktop App

1. You will have received an invite to our account, with the correct permissions assigned to you during discussion with your Singular representative and Foresight Enterprise IT. Complete the invitation by setting up your password and testing login.

2. Upon login to https://transfer.singulargenomics.com/files/ you will be presented with your data folder.

3. You may elect to use the desktop app, designed specifically for our service, that uses secure protocols to mount your data directory as a drive to your machine. This will use your username and password to authenticate, and require 2FA access.

4. Install the app from here: https://www.files.com/apps/desktop-app

5. Login and mount the directory. Navigate to your data and retrieve as needed.
